

## **II. del: TABELE S PODATKI**

### **Part II: DATA TABLES**

## **A. POVRŠINSKE VODE**

### **A. SURFACE WATERS**

## A.0. POJASNILA K PREGLEDNICAM

Poglavlje o površinskih vodah (A) sestavlja poleg uvodnih Pojasnil (A.0.) še osem podpoglavljev s preglednicami. V njih so prikazani osnovni podatki in rezultati meritev na 155 vodomernih postajah, ki so leta 2002 delovale v mreži za površinske vode.

Razlage pojmov in okrajšav v preglednicah:

- **Št.** - tekoča številka vodomerne postaje;
- **Šifra** - šifra vodomerne postaje (po šifrantu Agencije Republike Slovenije za okolje);
  - **Tip** - opremljenost postaje (**L** - limnigraf, **V** - vodomer, **P** - podatkovni zapisovalnik);
  - **Postaja** - ime kraja, kjer deluje vodomerna postaja. V kolikor se je mikrolokacija postaje spremnjala, je dodana rimska številka;
  - **Vodotok** - ime vodotoka, na katerem je vodomerna postaja;
  - **Kota "0"** - nadmorska višina kote "nulte" točke vodomera (v metrih nad gladino Jadranskega morja);
  - ---- - ni podatka;
  - **Suh** - v profilu vodomerne postaje ni pretoka;
  - **F** - površina porečja gorvodno od profila vodomerne postaje (vodozbirno zaledje) - v km<sup>2</sup>. Pri postajah na Bohinjskem oziroma Blejskem jezeru je navedena površina pojezerja;
  - **Stac.** - stacionaža (v km). Oddaljenost profila vodomerne postaje od izliva vodotoka (lahko tudi od državne meje, izbranega ponora);
  - **Začetek opazovanj** - leto, v katerem se je na vodomerni postaji začelo opazovati (vsaj višine vodne gladine);
  - **Stran** - stran, na kateri so za vodomerno postajo navedeni podatki o vodostajih (**H**), pretokih (**Q**), temperaturi (**T**) ter o vsebnosti suspendiranega materiala in količinah transportiranega suspendiranega materiala (**SM**);
    - **Hnk** - najnižji vodostaj v letu (mesecu) - konica;
    - **Hnp** - najnižji vodostaj v letu (mesecu) - dnevno povprečje;
    - **Hs** - srednji vodostaj v letu (mesecu);
    - **Hvp** - najvišji vodostaj v letu (mesecu) - dnevno povprečje;
    - **Hvk** - najvišji vodostaj v letu (mesecu) - konica;
    - **nHnk** - najnižji nizek vodostaj v obdobju - konica;
    - **nHnp** - najnižji nizek vodostaj v obdobju - dnevno povprečje;
    - **vHvp** - najvišji visok vodostaj v obdobju - dnevno povprečje;
    - **vHvk** - najvišji visok vodostaj v obdobju - konica;
    - **Qnk** - najmanjši pretok v letu (mesecu) - konica;
    - **Qnp** - najmanjši pretok v letu (mesecu) - dnevno povprečje;
    - **Qs** - srednji pretok v letu (mesecu);
    - **Qvp** - največji pretok v letu (mesecu) - dnevno povprečje;
    - **Qvk** - največji pretok v letu (mesecu) - konica;
    - **nQnk** - najmanjši mali pretok v obdobju - konica;
    - **nQnp** - najmanjši mali pretok v obdobju - dnevno povprečje;
    - **vQvp** - največji velik pretok v obdobju - dnevno povprečje;
    - **vQvk** - največji velik pretok v obdobju - konica;
    - **Qi** - i mesečni pretok, pretok, ki je zagotovljen i mesecev (i = 0,1,2,...12).

## Pojasnila k preglednicam

### A.1. Seznam vodomernih postaj za površinske vode (l. 2002)

V seznamu so navedene vodomerne postaje, ki so delovale v letu 2002. Urejene so po šifrah, kar pomeni, da si sledijo po povodjih in porečjih (Črnomorsko povodje: Pomurje, Podravje, Posavje; Jadransko povodje: Posočje, ostala porečja Jadranskega povodja) ter vodotokih. V okviru porečja so najprej navedene vodomerne postaje na glavnem vodotoku v smeri toka, sledijo postaje na pritokih, ki so prav tako razvrščeni glede na mesto izliva v glavno reko od njenega izvira proti izlivu. Od tega pravila odstopajo porečja Ljubljanice, Savinje in Krke, ki kot samostojna sledijo porečju Save. V njihovih okvirov si vodomerne postaje sledijo po enakem pravilu po toku navzdol.

V osnovna porečja so uvrščene tudi vodomerne postaje na kraških vodotokih, saj njihova hidrografska pripadnost večinoma ni sporna.

Pri Jadranskem povodju (brez porečja Soče) sledijo vodomernim postajam na Reki (Notranjska Reka) postaje na neposrednih pritokih Jadranskega morja, kakor si le ti sledijo od slovensko - italijanske do slovensko - hrvaške meje.

V seznam sta vključeni tudi vodomerni postaji na Blejskem in Bohinjskem jezeru.

Površina porečja (pojezerja) je določena na karti 1:25000. Pri kraških vodotokih so upoštevani rezultati sledenj podzemnih voda, na aluvialnih sedimentih pa hidroizohipse srednje gladine podzemne vode. V obeh primerih je podatek lahko sporen. V kolikor zaledja vodomerne postaje ni mogoče vsaj približno omejiti (obsežna conalna razvodja, kraške in ostale pretočitve - na primer pri v.p. Bistra, Vrhniku in Verd), podatka ne navajamo (opomba: kras ali ----).

Letnica pričetka opazovanj ne pomeni, da so v arhivu ARSO za postajo na voljo tudi podatki od tedaj pa do leta 2002. Delovanje nekaterih postaj je bilo prekinjeno, podatki so lahko izgubljeni ali pa so bili že objavljeni (npr. Jahrbuch des Hydographischen Zentralbureaus pred letom 1918).

### A.2. Mesečni in letni srednji vodostaji s konicami (l. 2002)

V preglednici so natisnjeni mesečni in letni srednji vodostaji (višine vodnih gladin) ter mesečne, letne in obdobne zabeležene konice (skrajne vrednosti, ekstremi).

Na vodomernih postajah, ki so opremljene z limnigrafom (tip = **L**) ali s podatkovnim zapisovalnikom (tip = **P**), so mesečne in letne vrednosti določene oziroma izračunane na osnovi analognega ali digitalnega nivograma. **Nizek** vodostaj za mesec je **Hnk**, **srednji** vodostaj je **Hs**, **visok** vodostaj pa **Hvk**. Na vodomernih postajah, ki so opremljene z vodomerom (tip = **V**) so mesečni in letni vodostaji določeni na osnovi vsakodnevnih opazovanj trenutnih vrednosti. **Nizek**, **srednji**, **visok** vodostaj so **Hnp**, **Hs** in **Hvp**.

Letne vrednosti so izpisane posebej, konici pa sta opremljeni z datumom.

Zabeleženi konici v celotnem opazovanem obdobju sta na limnigrafskih postajah **nHnk** oziroma **vHvk**, na postajah z vodomerno letvijo pa **nHnp** oziroma **vHvp**.

### A.3. Dnevni vodostaji z nivogramom (l. 2002)

Za izbrane postaje je v letopisu objavljena preglednica z dnevнимi vodostaji, mesečnimi in letnimi vrednostmi ter nivogramom. Podatki so rezultat obdelave limnigramov (vse izbrane vodomerne postaje so opremljene z limnigrafi). Dnevne vrednosti so srednji dnevni vodostaji. Iz njih so izračunani srednji mesečni in letni vodostaji (**Hs**). S skrajnimi vrednostmi (**Hnk**, **Hvk**) so navedeni v spodnjem delu preglednice.

V nivogramu je s srednjimi dnevнимi vrednostmi prikazano spremenjanje vodostajev preko leta.

#### A.4. Mesečni in letni srednji pretoki s konicami (l. 2002)

V preglednici so za večino vodomernih postaj, ki so delovale v letu 2002, natisnjeni mesečni in letni srednji pretoki ter mesečne, letne in obdobne zabeležene konice. Pretoki se ne določajo za postaje, ki nimajo pretočne krivulje (postaje na jezerih), ali če le-ta ni določena pri vseh vodostajih (postaje, ki jih dosežejo vode ob zajezitvi).

Na vodomernih postajah, ki so opremljene z limnigrafom (tip = **L**) ali s podatkovnim zapisovalnikom (tip = **P**), so mesečne in letne vrednosti določene oziroma izračunane na osnovi analognega ali digitalnega nivograma in ustreznih pretočnih krivulj. **Nizek** pretok za mesec je **Qnk**, **srednji** pretok je **Qs**, **visok** pretok pa **Qvk**. Na vodomernih postajah, ki so opremljene z vodomerom (tip = **V**), so mesečni in letni pretoki določeni na osnovi vsakodnevnih opazovanj trenutnih vodostajev. **Nizek**, **srednji**, **visok** pretok so **Qnp**, **Qs** in **Qvp**.

Letne vrednosti so izpisane posebej, konici pa sta opremljeni z datumom.

Zabeleženi ekstremi v celotnem opazovanem obdobju so na limnigrafskih postajah **nQnk** oziroma **vQvk**, na postajah z vodomerno letvijo pa **nQnp** oziroma **vQvp**. Pri vodomerni postaji Borl veljata navedeni skrajni vrednosti za obdobje po letu 1989, ko je postaja ponovno začela delovati. Leta 1981 so bila opazovanja za osem let prekinjena, podatki po l. 1989 pa, zaradi delovanja HE Formin, niso primerljivi s starimi.

#### A.5. Dnevni pretoki s hidrogramom in krivuljo trajanja (l. 2002)

Za izbrane postaje je v letopisu objavljena preglednica z dnevnimi pretoki, mesečnimi in letnimi vrednostmi ter hidrogram s krivuljo trajanja. Podatki so rezultat obdelave limnigramov (vse izbrane vodomerne postaje so opremljene z limnigrafi). Dnevne vrednosti so srednji dnevni pretoki, ki so določeni na osnovi srednjega dnevnega vodostaja ( $H_s$ ) in ustrezne pretočne krivulje. Iz njih so izračunani srednji mesečni in letni pretoki (**Qs**), ki so skupaj s skrajnimi vrednostmi (**Qnk**, **Qvk**) natisnjeni v spodnjem delu preglednice.

V hidrogramu je s srednjimi dnevnimi vrednostmi prikazano spremenjanje pretoka v letu ( $m^3/s$ ). Izrisana je tudi krivulja trajanja. Pod grafom so izpisani značilni pretoki po trajanju ( $Q_0, Q_3 \dots$ ). Izvedeni so iz srednjih dnevnih vrednosti.

#### A.6. Mesečne in letne srednje temperature vode s konicami (l. 2002)

V preglednici so prikazane mesečne in letne srednje vrednosti ter konice za vodomerne postaje, za katere je zabeležena temperatura vode. Opazovalci jo merijo enkrat dnevno z živosrebrnim vodnim termometrom. Iz odčitanih vrednosti so določene maksimalne in minimalne ter izračunane povprečne mesečne in letne temperature vode. Letni ekstremni temperaturi (minimum in maksimum) sta določeni z datumom.

#### A.7. Dnevne vsebnosti suspendiranega materiala z diagramom - v g/m<sup>3</sup> (l. 2002)

Transport suspendiranega materiala je bil merjen na vodomernih postajah. Vzorce za določanje vsebnosti zajemajo enkrat dnevno. Na osnovi laboratorijsko določene vsebnosti v vzorcih in večkratnih profilnih meritev se določa srednja dnevna vsebnost suspendiranega materiala. Iz dnevnih vrednosti se računajo povprečne mesečne in letne vsebnosti.

#### A.8. Dnevne količine transportiranega suspendiranega materiala z diagramom - v kg/s in sumarno linijo transporta - v 000 t (l. 2002)

V preglednicah so prikazane dnevne količine transportiranega suspendiranega materiala. Izračunane so iz dnevnih vsebnosti suspendiranega materiala in srednjih dnevnih pretokov. Iz dnevnih vrednosti se računajo povprečne mesečne in letne količine. Na diagramu so poleg vrednosti srednjega dnevnega transporta (v kg/s) prikazane tudi kumulative dnevnih vrednosti.

## A.0. EXPLANATION TO THE TABLES

The chapter on surface waters (A) consists of the introductory Explanation (A.0.) and ten sub-chapters with tables. In them basic data are listed, as well as the measurement results from 155 gauging stations which were included in the surface water network in 2002.

Key to the terms and abbreviations used in the tables:

- **Št. (No)** - current number of a gauging station;
- **Šifra (Code)** - code of a gauging station (acc. to the code list Environmental Agency of the Republic of Slovenia);
- **Tip (Type)** - station equipped with: **L** - water-level recorder; **V** - staff gauge; **P** - data logger;
  - **Postaja (Station)** - name of the place where a gauging station operates; if the microlocation of a station was changed, Roman numeral is added;
  - **Vodotok (Stream)** - name of the stream on which a gauging station is located;
  - **Kota "0"** (datum point) - the "zero" of the gauge altitude (in meters above the level of the Adriatic);
  - **----** - no data;
  - **Suho (Dry)** - the channel cross-section at the gauging station is dry;
  - **F** - the river basin area upstream of the channel cross-section at a gauging station (catchment area) - in sq km. At the gauging station of the lakes Bohinj and Bled, the stated area applies to their catchment basins;
  - **Stac.** - location (in km). Distance of the gauging station cross-section from the river mouth (also from the state border, or selected ponor);
  - **Začetek opazovanj** (Beginning of observations) - the year in which observations at a gauging station were begun (at least observations of the water level);
  - **Stran (Page)** - the page on which the data are listed for a gauging station: on water levels (**H**); on discharges (**Q**); on temperature (**T**); on concentration of suspended material and quantities of transported suspended material (**SM**);
    - **Hnk** - the lowest annual (monthly) water level - extreme;
    - **Hnp** - the lowest annual (monthly) water level - daily average;
    - **Hs** - mean annual (monthly) water level;
    - **Hvp** - the highest annual (monthly) water level - daily average;
    - **Hvk** - the highest annual (monthly) water level - extreme;
    - **nHnk** - the minimum low water level in a period - extreme;
    - **nHnp** - the minimum low water level in a period - daily average;
    - **vHvp** - the maximum high water level in a period - daily average;
    - **vHvk** - the maximum high water level in a period - extreme;
    - **Qnk** - the lowest annual (monthly) discharge - extreme;
    - **Qnp** - the lowest annual (monthly) discharge - daily average;
    - **Qs** - mean annual (monthly) discharge;
    - **Qvp** - the highest annual (monthly) discharge - daily average;
    - **Qvk** - the highest annual (monthly) discharge - extreme;
    - **nQnk** - the minimum low discharge in a period - the extreme;
    - **nQnp** - the minimum low discharge in a period - daily average;
    - **vQvp** - the maximum high discharge in a period - daily average;
    - **vQvk** - the maximum high discharge in a period - extreme;
    - **Qi** - i-month discharge; the discharge which is sure in i months (i = 0, 1, 2,...12).

## Explanation to the tables

### A.1. The list of surface water gauging stations (2002)

In the list, those gauging stations are included which operated in the year 2002. They are arranged according to their codes, which means that they follow one another according to the sea drainage basins, then the river basins (the Black Sea drainage basin: the Mura, Drava, Sava river basins; the Adriatic drainage basin: the Soča river basin and the rest of river basins of the Adriatic drainage basin), and streams. Within the frame of a river basin, gauging stations which are located on the main stream are listed first, in downstream direction; then follow the stations on the tributaries and they are also arranged as to the location of a tributary confluence with the main river, in the direction from the latter's source towards its mouth. Deviations from this rule occur in the cases of the Ljubljanica, Savinja and Krka river basins which are listed as three independent river basins, following the Sava river basin. Within their frames, gauging stations follow each other according to the same principle, i.e. downstream the river channel.

Gauging stations on the karst rivers are also included into the basic river basins, since their hydrographic classification is mostly not questionable.

In the Adriatic drainage basin (without the Soča river basin), gauging stations on the Reka (i.e. the Notranjska Reka river) are followed by the stations on the rivers flowing directly into the Adriatic, in the order as they follow one another from the Slovenian-Italian border to the Slovenian-Croatian border.

The list also includes the gauging stations on lakes Bled and Bohinj.

The area of a river basin is defined on a map of scale 1:25000. With the karst rivers, the results of underground water tracing were taken into account, and on the alluvial sediments, contour lines of mean water tables were observed. In both cases, data can be disputable. If the catchment area of a gauging station cannot be defined, approximately at least (large zonal watersheds, karstic and other bifurcations, e.g. gauging stations of Bistra, Vrhnika, and Verd), data are not listed (note: kras or ----).

The stated year of observation beginning does not necessarily mean that the Environmental Agency of the Republic of Slovenia archives keep all the data from that year up to the year 2002. Certain stations had ceased to operate, or the data might have been lost, or they were published (e.g. in the Jahrbuch des Hydrographischen Zentralbüroaus before the year 1918).

### A.2. Monthly and annual mean water levels with extremes (2002)

The table lists monthly and annual mean water levels (levels of water surfaces), as well as monthly, annual and periodic extremes (extreme values). For the gauging stations equipped with water-level recorders (**L** type) or with data logger (**P** type), monthly and annual values are defined or calculated on the basis of analog or digital level graph. **Hnk** stands for the monthly low water level, **Hs** for **mean** level, and **Hvk** for **high** water level. For those gauging stations which are equipped with staff gauges (**V** type) monthly and annual water levels are defined on the basis of daily registrations of current values. **Hnp** stands for **low**, **Hs** for **mean**, and **Hvp** for **high** water levels.

Annual values are listed separately, and dates are added to both extremes.

The two extremes in the observation period are marked with **nHnk** and **vHvk** for the stations with water-level recorders, and **nHnp** and **vHvp** for the stations with staff gauges.

### A.3. Daily water levels with level graph (2002)

For the selected stations, the list of daily water levels, monthly and annual values, as well as level graphs are published in the annals. These data are the result of processing water-level recordings (all selected gauging stations are equipped with recorders). Daily values are mean daily water levels. They were the basis for calculating mean monthly and annual water levels (**Hs**). Both extreme values (**Hnk**, **Hvk**) are listed in the bottom part of the table.

In the level graph the year-round fluctuation of water level is shown with mean daily values.

#### A.4. Monthly and annual mean discharges with extremes (2002)

For the majority of gauging stations which operated in 2002, monthly and annual mean discharges are listed in the table, as well as monthly, annual, and periodical registered extremes. Discharges are not defined for the stations without discharge curve (stations on the lakes), or the latter is not defined for all water levels.

For those gauging stations which are equipped with water-level recorders (**L** type) or with data logger (**P** type), monthly and annual values are defined or calculated on the basis of analog or digital level graph and the corresponding discharge curves. **Qnk** stands for **low** monthly discharge, **Qs** for **mean**, and **Qvk** for **high** discharge. For those stations which are equipped with staff gauges (**V** type), monthly and annual discharges are defined on the basis of daily registrations of current water levels. **Qnp** stands for low, **Qs** for **mean**, and **Qvp** for **high** discharges.

Annual values are listed separately, and dates are added to both extremes.

Registered extremes in the observation period are marked with **nQnk** and **vQvk** for the stations with recorders, and with **nQnp** and **vQvp** for the stations with staff gauges. In the Borl gauging station, the stated extreme values apply to period after the year 1989 when the station was put into operation again. In 1981, the observations were stopped for the next eight years, and the data after the year 1989 are not comparable to the old data due to the operation of the Formin hydro-power plant.

#### A.5. Daily discharges with hydrograph and duration curve (2002)

In the annals the tables are published for the selected stations, with daily discharges, monthly and annual values and the hydrographs with duration curves. These data are the result of processing water-level recordings (all selected stations are equipped with recorders). Daily values are mean daily discharges which were defined on the basis of mean daily water levels (**Hs**) and the corresponding discharge curves. From them, mean monthly and annual discharges (**Qs**) were calculated which are, together with extreme values (**Qnk**, **Qvk**), listed in the bottom part of the tables.

In the hydrograph, the annual discharge fluctuation is shown through mean daily values ( $m^3/s$ ). The duration curve is also plotted. Below the graph, typical discharges as to duration ( $Q_0$ ,  $Q_{3\dots}$ ) are listed. They were derived from mean daily values.

#### **A.6. Monthly and annual mean water temperatures with extremes (2002)**

The table shows monthly and annual mean values and the extremes for those gauging stations where water temperatures were registered. Temperature is measured once a day with mercury water-thermometer. From the registered values, maximum and minimum values are derived, and mean monthly and annual water temperatures are calculated. Dates are added to both annual extreme (minimum and maximum) temperatures.

#### **A.7. Daily concentration of suspended material with graph (2002)**

Transport of suspended material is measured at gauging stations. Samples for specifying concentration are taken once a day. On the basis of concentration in the samples, specified in laboratories, and several cross-section measurements mean daily concentration of suspended material was established. From daily values, average monthly and annual concentrations were derived.

#### **A.8. Daily quantities of transported suspended material with graph and yearly transport (2002)**

Monthly and annual quantities of transported suspended material are listed in the tables. They are calculated from daily values; the latter are derived from the data on mean daily concentrations of suspended material and mean daily discharges.

**A.1. Seznam vodomernih postaj za površinske vode (l. 2002)**

| Št.                  | Šifra | Postaja              | Tip | Vodotok            | Stac.<br>km | F<br>km <sup>2</sup> | Kota "0"<br>m n.m. | Začetek<br>opazovanj | Stran |     |     |         |

\* - postaja ima poleg karakterističnih tudi dnevne vrednosti za vodostaje in pretoke

10197\* - podatek je povzet iz Hidrološkega godišnjaka 1986

93.99\* - upoštevana je površina pojezerja, od tega odpade na površino jezera 3.15 km<sup>2</sup>

8.38\* - upoštevana je površina pojezerja, od tega odpade na površino jezera 1.42 km<sup>2</sup>

# - avtomatske vodomerne postaje - podatki (neuradni) so v realnem času na internetu (<http://www.arso.gov.si>) in teletekstu
